

THIRD ANNUAL
CANCER & AGING RESEARCH GROUP MEETING
CHICAGO, IL
SEPTEMBER 25-26, 2010

Judith Campisi, PhD

Judith Campisi received her doctorate in Biochemistry from the State University of New York, Stony Brook, and postdoctoral training in the area of cell cycle regulation and cancer at the Harvard Medical School. Dr. Campisi is currently Professor at the Buck Institute for Research on Aging and Senior Scientist at the Lawrence Berkeley National Laboratory, where she is conducting aging and cancer research. During her time as Assistant and Associate Professor at the Boston University Medical School from 1984-1990, she became interested in the control of cellular senescence and its role in tumor suppression and aging. At the Buck Institute and Lawrence Berkeley National Laboratory, Dr. Campisi continues to study cellular senescence and has established a broad program in various aspects of aging. She is the recipient of two MERIT awards from the National Institute on Aging (1995), the 1997 AlliedSignal Award for research on aging, and the Longevity Prize from the IPSEN Foundation. She serves on several editorial and advisory boards.
